                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
```

The present invention provides the protein and coding sequences of several novel human proteins, designated NOVX. These can be used in the treatment of, amongst others, cancers, autoimmune diseases, infections, inflammatory diseases, storage disorders, muscle disorders, neurodegenerative diseases and developmental defects. The present

Sequence 2860 BP; 557 A; 950 C; 858 G; 495 T; 0 U; 0 Other; is a coding sequence of the invention

sednence

or

Novel isolated polypeptide, designated NOVX, useful for treating preventing in NOVX-associated disorders e.g. cardiomyopathy, atherosclerosis, diabetes, cancer, allergy, asthma, Crohn's disea

2002-590741/63.

The invention describes an isolated polypeptide (I), useful in the manufacture of a medicament for treating a syndrome associated with a human disease. (I), the polymucleotide encoding it (II) and an antibody (III) to (I) are useful for treating or preventing cancer, metabolic disorders, skin disorders, infectious disease, anorexia, behavioral disorders, anxiety disorders, brain disorders, heart and blood neurodegenerative disorder, Alzhaimer's disease, Parkinson's disorder, immune disorders, anxiety disorder, Alzhaimer's disease, Parkinson's disorder, immune disorders, hematopoietic disorders, and the various dyslipidaemias, metabolic disturbances associated with obtaining disorders, immune disorder, and the metabolic syndrome X and wasting disorders associated with chronic diseases. (I), (II) or (III) are useful in screening assays, decetion predictive medicine (e.g., therapeutic assays), and in methods of treatment (e.g., therapeutic assays), in methods of treatment (e.g., therapeutic assays), and useful as immunogen to produce antibodies immunospecific for (I) to screen for potential agonist and antagonist compounds, and as bait protein in a two-hybrid or three-hybrid assay. (II) is useful in gene therapy, to express (I), to detect (I) mana quentic lesion in a (I) therapy, to express (I), to detect (I) mRNA or a genetic lesion in a (I) gene, and to modulate activity of (I). A cell containing a vector exressing (I) is useful for producing non-human transgenic animals. This encodes a novel human polypeptide described in the invention or Novel isolated polypeptide, designated NOVX, useful for treating of preventing cancer, diabetes, obesity, dyslipidemia, anorexia, and metabolic, neurodegenerative, immune and hematopoietic disorders. Claim 9; Page 93; 316pp; English.

WPI; 2002-583619/62 P-PSDB; ABB09520. Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders.

Claim 9a; Page 121; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14

(ABB09501-ABB09524), collectively referred to as NOVX proteins, and
nucleic acides encoding them (AB03897-AB03902). NOVX proteins and
nucleic acides encoding them (AB03897-AB03902). NOVX proteins and
nucleic acides encoding them (AB03897-AB03902). NOVX proteins are
nucleic acides encoding them (AB03897-AB03902). NOVX proteins are
succiated disorders or in the manufacture of a medicament for treating
such disorders with specific applications described for each of the 24
NOVX proteins, based on their homology to known proteins. Various
CC disorders are associated with NOVX proteins including neurological
disorders and autoimmune diseases), mysathenia gravis, asther
cc disorders and autoimmune diseases, physathenia gravis, asther
cc e.g., hypertension), reproductive disorders, endometriosis,
various forms of arthritis, diabetes, thyroiditis, cardiovascular disease
(e.g., hypertension), reproductive disorders, endometriosis,
incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis,
incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis,
disorders, obseiry, bacterial infections and particularly ardiomyopathy
atherosclerosis, cell signal processing-related disorders and disorders
cof metabolic pathway regulation. NoVX nucleic acids and polypeptides may
albends to a NOVX protein, and are also useful as targets for the
as neurogenesis, cell differentiation, cell motility a cell or tissue type and
are useful as a source of primers or probes for forensic biology and for
identifying and cloning NOVX homologues in other cell types. Cell
comprising NOVX nucleic acids are useful for producing non-human
transgenic animals which are useful for producing cell type acining NOVX proteins and for identifying and evaluating models acutive The gene encoding NOV11 transmembrane receptor UNC5H2-like protein NOV11.

Sequence 7809, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rubenfield et al.
